

## CONTROL DAMPER

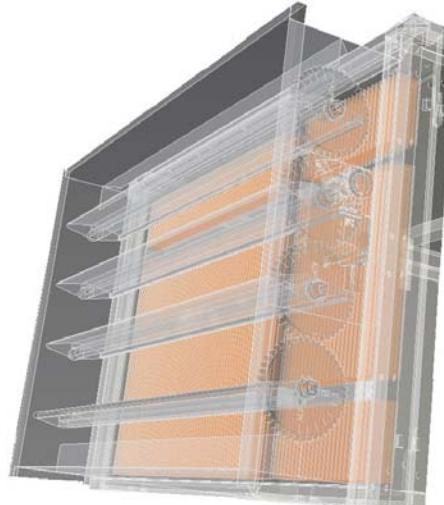

## Control damper RA-ZS

If RA-ZS control damper is connected to air handling machine or to rectangular duct network, air resistance can be adjusted and it serves for opening and closing of the air handling system.

The damper RA-ZS consists of galvanized steel frame, damper leaves made up from aluminium, rubber seal profiles, plastic gears which enables the damper leaves to move into opposite direction. Heat resistance of rubber and plastic components is maximum 110 C°, but lifetime decreases if the temperature is more than 60 C°. Damper can be moved with the help of a lockable hand crank.

*Options:*

- Servo motor for air damper 230V; operating voltage is 24 V
- With stainless steel frame, but aluminium lamellas
